

## Step 6

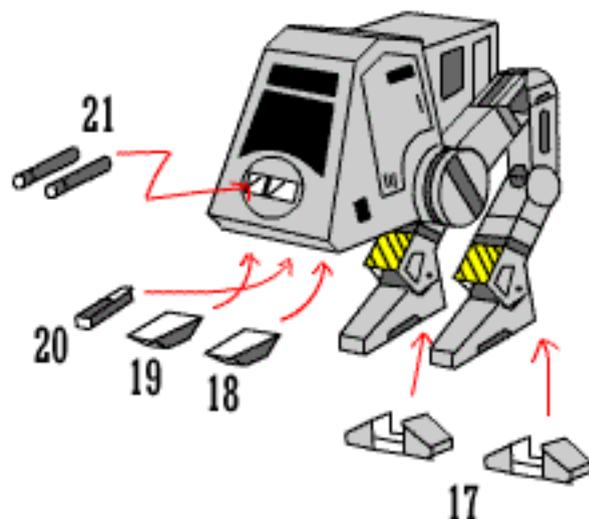

Do not stick the feet into the legs. Instead, put both feet on a flat surface and push the model down onto them. This will ensure that your model doesn't wobble.

Glue 17 to the bottom of the ATPT's feet

Glue 18-20 under the cockpit

Roll up 21 and stick it into the hole on the front. You can try to glue it if you want, but it's usually not necessary.

## Step 7

All done  
Enjoy!
